Janine, I would be thr contact person for this meeting. But having a meeting is premature - I would like the CPG to obtain a formal report from both proposed processing facilities with demonstrates using all of their existing permits (air, water, etc.) approvals that they can accept this material @ the given contaminant profile and meets all limits, etc. imposed in the permits. Without this type of report and the ability to review it, a missing would be useless.

OK, I was expecting this. Just so you know, Jay Nickerson has taken over as the case manager for 10.9, though I will still be involved. I am copying him as well as Suzanne Dietrick who will choose from her staff who/how this will be handled. Rob, maybe when Suzanne responds you can send around an email with available dates and times.
Regards, Janine

Subject: RM 10.9 Removal Action

Janine:

The CPG has identified two facilities in the Newark Bay complex that can potentially stabilize sediments from the RM 10.9 Removal Action. They are the Cashman Marine facility in Elizabeth and the Clean Earth facility in Kearny. Based on our discussions with both companies, we understand that they believe they have the necessary permits to process the RM 10.9 sediments. We also understand that the Department

issues an Acceptable Use Determination (AUD) prior to a facility processing dredged sediment. We are working with both facilities at this point and would like to discuss the Department's process and requirements for approving the two facilities to process the RM 10.9 sediments.

If we could schedule a call in the next week with you and any other individuals that we might work with to secure Departmental approval to send the sediment to these facilities it would be greatly appreciated.

Thank you.
